VADIS D.C.II

Digital Audio Production Console

Haar, Germany – KLOTZ DIGITAL is presenting the new VADIS D.C.II Digital Audio Production Console at the Tonmeistertagung 2000 in Hanover

The new digital audio production console is designed for production applications in broadcast, television and postproduction studios.

The console is available in different configurations and frame sizes from 8 up to 24 faders but also for larger systems with almost unlimited numbers of inputs and outputs. The main philosophy of the new production console is a clear channel focused layout enabling quick and direct access to all channels parameters.

VADIS Audio/Media Network

The unique design, separation of audio via decentralized VADIS network and control hardware (D.C.II, PC, GPI unit, etc.) provides a reliable, powerful and flexible audio mixing system. This separation of audio and control gives operators the speed needed for live broadcasts, reduces facility wiring to a minimum, eliminates problems associated with traditional plant-wide audio cabling and ultimately provides faster installation. In addition when VADIS equipped control rooms are connected, with only one fibre optic cable and a single CAT 5, the ability to share audio, integrate plant-wide control and increase operator productivity is unlimited.

Each channel is equipped with four LED increment controllers, also providing a LED level metering and overload display. An eight-digit display, for parameter labeling or fader function adds to the high efficient operation of the desk. Each parameter can either be set separately or by recalling preset definitions of e.g. EQ, Dynamics and Delay functions. Optionally the console can be equipped also with motor faders.

Optional touch screens for channel related and global functions like e.g. metering or for the desk administration give a high level of transparency of all control parameters and functions to the user. KLOTZ DIGITAL offers high level and easy to use surfaces, which adapt to all requests of the modern production engineering.

Optionally direct access and control of external HD recording systems can be provided. Still the entire production process can be implemented completely without additional hardware using the VADIS D.C.II digital audio production console.

KLOTZ DIGITAL is the inventor and global market leader of digital signal processing and distribution systems for the modern Audio/Media industry. KLOTZ DIGITAL's VADIS platform architecture decentralizes the various types of signal processing and allows integration of multimedia and telematic services.
