KLOTZ DIGITAL AND WINCOMN TECHNOLOGY DEVELOPMENT SIGN EXCLUSIVE VARIZONE DISTRIBUTION AGREEMENT FOR CHINA

Beijing, China – April 2008 – KLOTZ DIGITAL

Asia Pacific is proud to announce Wincomn Technology Development Co., Ltd. as their exclusive distributor for all VARIZONE Performance-Line and VAB-Line products in China. “We are delighted to have found such a strong and established partner in the Chinese market, who has proven their performance time and time again with other established brand products such as Christie, DNP, DIS, Extron and WolfVision. We are looking forward to a long and prosperous business relationship between our two companies”, says KLOTZ DIGITAL CEO – Thomas Klotz. Patrick Salloch – General Manager KLOTZ DIGITAL Asia Pacific adds, “This is the first step for us to establish VARIZONE as the new industry standard in the building information system industry in China. Wincomn’s sales channels, their technical expertise, vision and commitment will be the winning combination for us in this cost sensitive market.”

VARIZONE on its Victory Lap in Australia

Recent projects in the Asia-pacific region have seen KLOTZ DIGITAL’s VARIZONE Performance-Line technology chosen for various projects in Australia including the Sydney Star City Casino and the Victorian Parliament. The ground breaking technology is currently considered in various multi million dollar tenders around Asia. With the introduction of the VAB-Line technology KLOTZ DIGITAL now offers its digital PA/BGM/EVAC system at a price which everyone can afford. Wincomn will show the technology at sells seminars around China in Beijing (22.04), Guangzhou (06.05),

Shanghai (20.05) and at the PALM Exhibition in Beijing. For venue details please contact Wincomn at +86-10-67856868 or visit www.wincomn.com.cn.

VARIZONE – the Innovative PA Solution for Any Facility

VARIZONE is a revolutionary new audio technology used for audio information, background music (BGM), voice evacuation and paging. It transports audio to individual play-out locations, allowing highly-focused paging, evacuation and microcasting of individual audio programs. Combining a state-of-the-art digital multi-channel bus structure with a robust, industry proven powered speaker system VARIZONE offers amazing configuration and control capabilities. The fully digital speaker bus transmits 8 audio channels and control data via standard CAT5 cable. The avant-garde, fully digital PA system VARIZONE provides opportunities that far exceed that of traditional systems designed around mixer/routers, rack mount amplifiers and 70/100V speaker lines. Zones and loudspeakers are configured by software independent from speaker runs. Any play-out zone can be changed at any time through simple configuration changes in the GUI (Graphical User Interface). VARIZONE is in accordance with modern security and fire evacuation standards. For example it automatically checks for technical and signal faults throughout the entire system down to the single component level. This minimizes downtime as well as loss of building communication and increases security.

###
